

EUROLLS PRODUCT TRACKING

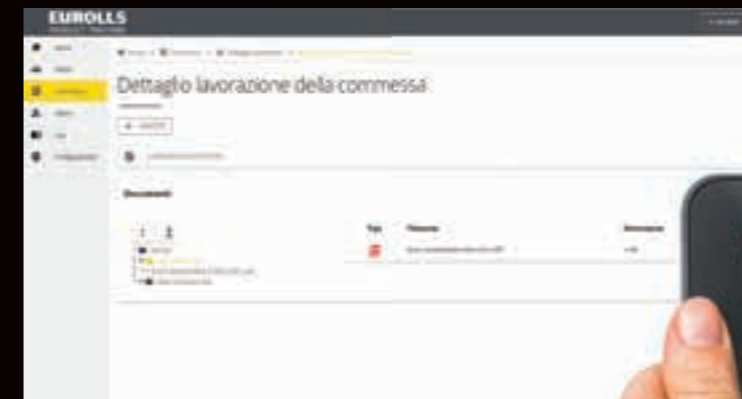

TOTAL CONTROL ON THE TRACEABILITY AND QUALITY OF YOUR PRODUCT IN DIGITAL FORMAT

RAPID TRACEABILITY SYSTEM AND DIGITALIZATION OF PRODUCT DOCUMENTATION

The integrated traceability of the products developed by Eurolls is now also made available to customers. All documentation relating to the product is processed digitally. Through the association with various technologies, such as qr-code or data matrix identifiers, rfid tags, there is the possibility of quickly access to the documentation.

Through an industrial device it is possible to consult the documentation, such as manuals, certificates, drawings, quality documents.

HOW DOES IT WORK

Through the app it is possible to consult and search for the available information of proper product. This can be done with different technologies depending on those available on the product.

The system can be equipped with rugged industrial tablets and special reading systems. The application is also available for all devices.

THE ADVANTAGES

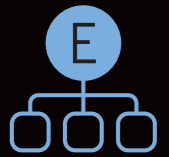

Digital identification of products allows the possibility of internal factory tracking, warehouse and plant management

The customer can have access on the data for the management of the quality documentation.

Remote management allows the update of data of new products.

Customers can have in a single application all the documentation of eurolls products which can also be downloaded and archived in their own structure.

APP CAN BE USED ON DIFFERENT DEVICES
